Objective

MCA candidate specializing in high-performance web applications. Currently focused on bridging the gap between Deep Learning and Angular architectures through a multi-model deepfake detection platform for news media. Expert in TypeScript and Component-driven design

Experience

- Web Developer Intern | Current
 - Developing enterprise-level web interfaces using Angular and TypeScript.
 - Designing modular, reusable components to improve application scalability.
 - Integrating complex backend logic with responsive frontend designs.

Education

- **Sathyabama University** 2024-2026
Master of Computer Applications
8.33
- **Thiruvalluvar University** 2021-2024
Bachelor of Computer Applications
7.9

Skills

- Frontend Frameworks: Angular (Signals, RxJS), React.js
- Web Technologies: TypeScript, JavaScript (ES6+), HTML5, CSS3.
- Programming: Python, Java (OOP).
- AI & Security: Deepfake Detection, Cloud Storage Encryption, Machine Learning.
- Tools: Git, GitHub, REST APIs, MS Office

Projects

- **Multi-Model Deepfake Detection System (Final Year Project)**
Developed an AI-based system integrating NLP, audio emotion recognition, and facial expression analysis to classify sentiment (Positive/Negative/Neutral) from text, audio, and video using multimodal fusion, improving accuracy and context understanding.
- **Enabling Privacy Protection For Cloud Storage Image And Content Regulation**
A system ensuring secure, encrypted, and privacy-protected cloud storage with controlled access and data confidentiality.
- **Stock Market Prediction**
A model that predicts stock market trends using machine learning, analyzing historical data to forecast future price movements accurately.

Languages

- English
- Tamil

Certifications

- - Naan Mudhalvan Course
 - Machine Learning Using Python
 - Python For Data Analytics
